

**COMMERCIAL GT LANE**  
**ENTRY GATE AND EXIT GATE INSTALL PROJECT:**

Dear Ground Transportation (GT) Providers,

The Tucson Airport Authority (TAA) has begun a project to upgrade the gate management system at TUS Airport. This exciting project involves the installation of new state-of-the-art gate equipment and other upgrades which will improve the quality and efficiency for the TUS Airport commercial roadway users. TAA's project contractor will begin the process of preparing for the installation of the new Commercial GT Lane gates very soon and **the new entry and exit gate installations will take place in early January 2025.**

**Commercial lanes will be open for access at all times for the duration of the project.** TAA anticipates minimal impact to ground transportation providers who currently access the commercial roadway using a Prox Card. Providers will see the new gate equipment (including new card readers and new gates with lights) **which will accept all currently issued Prox Cards.** The only change will be that GT Providers will scan the Prox Card both upon **entry and exit (new location)** of the gated Commercial GT Lane. Fees remain the same.
