ARIZONA GOVERNMENT WELL RECORDS SEARCHED

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

State Wetlands Data: Riparian Vegetation Associated with Perennial Waters

Source: State Land Department

Telephone: 602-542-4094

Arizona Well Registration Database

Source: Department of Water Resources

Telephone: 602-771-8535

The Wells database contains all wells registered in the state.

Water Well Information

Agency: Department of Environmental Quality

Telephone: 602-771-2300

Oil and Gas Well Database

Source: Arizona Geological Survey

Telephone: 520-770-3500

This database contains Oil and Gas wells in the State of Arizona. Includes all wells that have been permitted by the State Oil and Gas Conservation Commission (OGCC). Gas wells include natural gas, helium, and carbon dioxide wells.

Region 9, Tucson International Airport Area Superfund Site; Review of the Draft
Preliminary Assessment Report for Aqueous Film-Forming Foam (AFFF) Areas at
Tucson International Airport, September 2023**

Dear Ms. Aycock:

TechLaw Consultants, Inc., dba TechLaw, completed a cursory review of the Draft Preliminary Assessment Report for Aqueous Film-Forming Foam (AFFF) Areas at Tucson International Airport, dated September 2023 (the Draft PA), to identify significant issues. We noted some inconsistencies that are detailed in the enclosed comments; however, no major issues were identified.

We appreciate the opportunity to provide technical services to U.S. EPA on this project. Should you have any questions or comments, please contact Mr. Brian Geringer, Task Order Manager, at (571) 464-0522.

Sincerely,

A handwritten signature in blue ink, appearing to read 'MP'.

**Review of the Draft Preliminary Assessment Report for Aqueous Film-Forming Foam
(AFFF) Areas at Tucson International Airport
September 2023**

The following comments were generated based on a review of the Draft Preliminary Assessment Report for Aqueous Film-Forming Foam (AFFF) Areas at Tucson International Airport September 2023 (the Draft PA).

GENERAL COMMENTS

1. The Draft PA indicates per- and polyfluoroalkyl substances (PFAS) sampling has been conducted; however, additional details associated with the areas investigated under the Draft PA investigation are not provided. For example, Section 2.2.5 (Groundwater Use and PFAS Sampling) indicates results from PFAS sampling conducted at the Central Well Field wells within the impact of the Tucson International Airport Area Superfund Site (TIAA) and nine private wells near the TIAA Superfund Site were found to exceed the 2016 USEPA Health Advisory Limits (HALs); however, the location of these wells relative to areas of concern (AOCs) is not provided. It is noted that Appendix C (Supporting Documentation) provides an overview map of Tucson Water Production Well Combined PFAS Detections; while the Tucson Airport Remediation Project (TARP) is labelled on the map, no other TIAA features are included to support correlation between the data and specific areas of the site. Additionally, the HALs used to screen data in the earlier sampling events are outdated, and the section should provide an update based on the most recent 2023 USEPA Regional Screening Levels (RSLs) for PFAS. Please revise the Draft PA to include an updated historical sampling narrative utilizing the 2023 USEPA Regional Screening Levels (RSLs) for PFAS and to clarify the locations with historical PFAS exceedances in relation to AOCs.
2. It is unclear whether potential sources of PFAS, other than AFFF, have been investigated at TIAA, or when investigation of other sources may be implemented. Section 1 (Introduction) states, “This Preliminary Assessment (PA) report documents the evaluation of potential sources of per- and polyfluoroalkyl substances (PFAS) related to the use and storage of aqueous film forming foam (AFFF) at Tucson International Airport (TUS);” however, it is unclear whether potential PFAS sources other than AFFF have or will be investigated. For example, metal plating processes, storage warehouses, pesticide use, automobile maintenance shops, photographic processing facilities, laundry/waterproofing facilities, car washes, stormwater or sanitary sewer components, and biosolid application areas, are areas where PFAS may have been used and released. Please revise the text to clarify whether or when the site will be evaluated for all applicable types of PFAS use.
3. The Draft PA lists 38 AOCs; however, it does not provide a naming system to facilitate tracking through the document and potential future submittals. For example, the AOCs could be numbered consecutively which would reduce potential confusion between individual areas discussed in the Draft PA and support continuity between the Draft PA and future submittals. Please consider implementing a naming and numbering convention for the AOCs included in the Draft PA.

4. The text of the Draft PA indicates that there were no air releases of PFAS; however, this is misleading. Some constituents of AFFF, including perfluoroalkyl iodides (PFAIs), fluorotelomer iodides (FTIs), fluorotelomer alcohols (FTOHs), fluorotelomer olefins (FTOs), fluorotelomer acrylates (FTACs), and fluorotelomer methacrylates (FTMACs), have been demonstrated to be volatile (see <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5258797/>), and FTOHs have been found in some AFFF formulations. As such, a vapor intrusion exposure pathway for industrial workers should be considered during future investigations. Please revise the text to discuss the potential for a vapor intrusion exposure pathway based on the volatile constituents that may be included in AFFF formulations.
5. The text does not discuss the potential for residual AFFF to be released into the environment after replacement foam was introduced. The text indicates that fire trucks and AFFF systems were rinsed to decontaminate them; however, studies indicate that triple rinsing fire trucks or AFFF fire suppression systems in buildings does not ensure removal of all PFAS. As a result, PFAS may remain in the system and be released to the environment as the replacement foam is used. Please revise the text to consider that residual PFAS contamination may be present after rinsing of fire trucks and AFFF systems, and therefore, may be released after replacement foam was introduced.
6. It is unclear why some areas that may be of potential interest depicted in Appendix C (Supporting Documentation) are not included in the Draft PA narrative and depicted on site figures. For example, Appendix C depicts the Hudgon Air Service and the General Aviation (PDF Page 109) and the CFR Fire Station and burn pits (PDF Page 110) but they are not included on other figures or discussed within the text. It is also unclear if all hangars were evaluated for the presence of fire suppression systems. Please revise the Draft PA to discuss the information presented in the historical supporting figures in Appendix C in detail to ensure all potential sources of PFAS contamination have been addressed and clarify whether all hangars that may have or have had fire suppression systems have been addressed.

SPECIFIC COMMENTS

1. **Section 3.1.1, TAA Hangars – Former Fire Training Area, Page 7:** The text indicates the Former Fire Training Area (FTA) is located south of the Old Fire Station; however, review of Figure 2 (Potential AFFF Areas of Concern Zone 1) indicates that the Former FTA is actually located south of the Original Fire Station. Please revise the text to address the discrepancy in the area name.
2. **Section 3, Fire Training Areas, Section 4, Non-Fire Training Areas and Appendix A, Photo Documentation, PDF Pages 60, 65, 70, and 75:** Some of the photographs depict red stained surface cover that may be a result of AFFF spills, including the following locations: Bombardier Building X, Bombardier Building H, TAA Fire Station Nozzle Testing Area, Current TAA Fire Station (B-284) and Twin Engine (Piper PA30) Emergency Response Area. However, the corresponding area writeups in Sections 3 and 4 do not include these observations. For example, Section 4.3.5 (Bombardier Building H) states that no use or spills of AFFF were recalled; however, the concrete surrounding one of the four hose stands

appears to be stained red; and, Section 4.5.1 (Current TAA Fire Station (B-284) does not discuss the evidently stained concrete likely resulting from AFFF spills. Additionally, since the ages of these buildings are unknown, and spill reporting prior to 2000s and recollection of historical spills, due to employee changeover, is unreliable, there is potential for unidentified spills to have occurred. Finally, in areas where there were undocumented or documented AFFF spills, there is a potential for contaminant release to the environment even if the spills were cleaned, due to permeability and discontinuity (e.g., cracks and joints) of concrete surfaces. As such, all areas with a foam system or evidence of potential AFFF spills (e.g., red staining) should be discussed and investigated further. Please revise the discussions in Sections 3 and 4, where appropriate, to discuss the red stained concrete visible on photographs in Appendix A that may be indicative of AFFF spills and recommend additional investigations in any location with a foam system or where the age of the facility could have supported AFFF use. In addition, please revise the Draft PA to indicate whether employees and others that were present during inspections or interviews had direct knowledge of each facility over the full operational period of the facility.

- 3. Section 3.2.2, Surface Water Pathway, Page 7, and Section 3.4.2, Surface Water Pathway, Pages 9 and 10:** Areas identified as receiving runoff from Zone 1 and Zone 2 are not proposed for further PFAS investigation. The text indicates that the El Vado Wash received runoff from Zone 1 and the Santa Clara Wash received runoff from Zone 2, as depicted on Figures 2 (Potential AFFF Areas of Concern Zone 1) and 3 (Potential AFFF Areas of Concern Zone 2), respectively; however, neither area is recommended for investigation. Additionally, as presented on Figure 3, fire drill areas D-6 and D-3 appear to discharge directly to the Santa Clara Wash, and therefore this area should be recommended for further investigation. Finally, the El Vado Wash is not labeled on Figure 2. Please revise the Draft PA to recommend further investigation at the El Vado Wash and the Santa Clara Wash, and label the El Vado Wash on Figure 2.
- 4. Section 4.1.3, US Forest Service (D-261), Page 13:** The text does not provide sufficient discussion to support the conclusion that no evidence of historical PFAS use in this location exists. The text indicates the US Forest Service used this facility starting in 1973 and includes a 2021 referenced statement that the US Forest Service does not use PFAS as an ingredient in their current fire systems; however, the historical fire retardant composition should also be discussed to support the noted conclusion. Please revise the text to discuss the historical fire retardant composition from 1973 to the present.
- 5. Table 3, List of Potential Aqueous Film-Forming Foam Areas of Concern, PDF Page 41:** No further remedial action planned is the recommendation for the following AOCs: Fire Drill Training Area D-4, Original Fire Station, and U.S. Forest Service; however, it is unclear whether the limitations of the PA as described in Section 5.1 (Limitations and Potential Data Gaps) support this conclusion. The text states, “PFAS are emerging contaminants, and because of this recent awareness, the airport does not have the same detailed records regarding the storage, handling, and release of AFFF as for other substances used at the airport;” as such, it is unclear whether the Draft PA provides sufficient evidence to exclude these sites from further investigation. For example, the dates of use of the described areas and therefore the assumption of AFFF use could be incorrect. To reduce the uncertainty

associated with the lack of data and unclear early use of AFFF, sampling should be performed to support the decision process. Please revise the Draft PA to recommend that all AOCs proceed to an RI.

6. **Appendix A, Photo Documentation, PDF Pages 64 to 65:** The photographs depict hanger drains and use the caption “closed drains” in the photograph; however, it is not clear what is meant by closed drains. For example, it is unclear whether these drains are a component of the sewer system, stormwater system that discharges to the washes, or discharges to other locations. Please revise the Draft PA to define the term closed drains and discuss the drainage output location(s).
7. **Appendix B, Interviews and Site Visit Notes, Page 3 of 5:** The site interview form indicates five-gallon buckets were used to transfer foam into vehicles and were disposed in dumpsters; however, it is unclear where the dumpsters were located and where the associated wastes were disposed. For example, it is unclear whether a landfill within TIAA was used for disposal or if the wastes were shipped offsite. Please revise the Draft PA to clarify where the five-gallon buckets were managed and disposed.
8. **Appendix B, Interviews and Site Visit Notes, Page 3 of 5:** It is unclear whether all of the drainage areas surrounding incident sites and fire stations are recommended for further investigation. The site interview form indicates vehicles were decontaminated by filling the pipes with water and spraying the contents to remove left over foam, either at the incident site or at the Fire Station; however, it is unclear whether all of the associated drainage areas are included in the recommendation for further investigation. For example, the drainage area surrounding the Alpha 17 Runup Pad Fire Training Area, as shown in the photograph in Appendix C (Supporting Documentation, PDF Page 117), and Martin Reservoir, as identified by Chief Tom Tucker in Appendix B (Interviews and Site Visit Notes, PDF Page 86) should be investigated. Please revise the Draft PA to clarify whether all drainages potentially associated with the AOCs will be included for further investigation.
9. **Appendix B, Interviews and Site Visit Notes, Page 4 of 5:** The site interview form for Chief Tom Tucker, indicates inactive FTA logbooks may be helpful in determining whether AFFF use is documented. The form also indicates that office/records warehouse would have logs of aircraft crashes. However, it is unclear whether review of these logs and logbooks was included in the scope of the Draft PA. Please revise the Draft PA to clarify whether the logbooks for old FTA activities and aircraft crashes were reviewed.
10. **Appendix B, Interviews and Site Visit Notes, Page 4 of 5:** The site interview form for Chief Tom Tucker, indicates AFFF may have been used as a precaution in response to fuel releases to prevent fires; for example, foaming of runways. However, it is unclear whether all of the runways have been evaluated in the Draft PA and whether runways and associated drainages will be included for further investigation. Please revise the Draft PA to clarify whether runways have been evaluated for potential AFFF contamination. If not all runways were evaluated, please revise the Draft PA to recommend the inclusion of runways that may have received precautionary foam in further investigations.

- 11. Appendix B, Interviews and Site Visit Notes, Page 4 of 5:** The site interview form for Chief Tom Tucker, indicates AFFF may have been used at the Ascent west ramp; however, it is unclear whether this area is included in either the Ascent Aviation Fire Emergency Response area or Ascent Aviation Hangar 2. As the site interview form indicates that AFFF may have been used on the Ascent west ramp, it should be included for further investigation. Please revise the Draft PA to clarify whether Ascent west ramp is included within a current AOC.
- 12. Appendix C, Supporting Documentation, PDF Page 113:** The Zone F Site Plan – North Apron Area figure depicts a north apron drainage area in the northwest side of the airport boundary that may have received AFFF-contaminated wastewater from the surrounding AOCs (including the Air National Guard (ANG) or the TAA Annual Nozzle Testing Area); however, sampling is not recommended in this area. All areas that may have received AFFF contaminated water should be included in the scope of the Draft PA. Please revise the Draft PA to include sampling in the North Apron Drainage Area.

RE: TIAA – ADEQ Comments - *Draft Preliminary Assessment Report for Aqueous Film-Forming Foam (AFFF) Areas at Tucson International Airport, Tucson, Pima County, Arizona*; prepared for Tucson Airport Authority; prepared by Parsons Environment & Infrastructure Group Inc.; dated September 2023.

Dear Mr. Nichols:

Arizona Department of Environmental Quality (ADEQ) Federal Projects Unit (FPU) reviewed the above referenced document. ADEQ's comments are presented below.

GENERAL COMMENTS

1. TechLaw, under contract to the United States Environmental Protection Agency (US EPA) reviewed the referenced document and presented comments to the US EPA. ADEQ reviewed the TechLaw comments and considers the comments generally appropriate (Correspondence to Ms. Mary Aycock, US EPA, San Francisco, CA; from TechLaw, Lakewood, CO; TechLaw; Correspondence reference 83122-09-10-APAA-DR-1947; dated November 9, 2023).
2. Surface water drainage areas, washes, wastewater disposal areas, and outfall locations do not appear to be included as potential Aqueous Film-Forming Foam (AFFF) areas of concern (AOCs). According to the document there are many incidents and locations where AFFF was released to the land surface. In the interviews it was noted "*Before approx. 2019, any discharges would have been left on ground.*" [Interview of Chief Tom Tucker, Question 21, Appendix B]. During the interview of Chief Tom Tucker, when asked about drainage patterns and point source is likely AFFF Area of Concern (AOC), he answered "*Nearby washes.*" [Interview of Chief Tom Tucker, Question 37, Appendix B]. Additionally, it is unclear if discharge at fire training areas were contained and or left on

Phoenix Office

1110 W. Washington St. | Phoenix, AZ 85007

azdeq.gov

the surface. There is the possibility that AFFF releases to the land surface were subsequently carried from release location(s) by storm waters and or surface washings. ADEQ considers surface water drainage areas, washes, wastewater disposal areas, and outfall locations as potential environmental threat routes and should be considered potential AOCs.

3. Tucson Airport Authority (TAA) preliminary assessment effort should assess and incorporate available data from nearby per- and polyfluoroalkyl substance (PFAS) investigations. ADEQ understands that Department of Air Force (DAF) facilities near the TAA property have performed select PFAS sample collection and sample analyses. DAF facilities like Morris Air National Guard and also the area commonly called Air Force Plant 44 have obtained some select PFAS analytical results for select areas. Coordinating TAA efforts, after correlating others' efforts to TAA property, could benefit stakeholders.

SPECIFIC COMMENTS

1. The description of Fire Drill Training Area D-4 states "*This fire training area may have overlapped with the initial use of AFFF.*" [Page 9, Section 3.3.2.2, 1st paragraph, last sentence]. However, in Table 3 it states "*Former fire training area [D-4] used in the late 1950s and 1960s, when it is presumed that AFFF was not yet on the airport.*" [Table 3]. Please verify the potential use of AFFF at Fire Drill Training Area D-4.
2. In Table 3, it is noted that the Air National Guard Current Nozzle Testing Area is currently part of the Air National Guard Remedial Investigation. Please provide reference indicating this area is included in the Air National Guard Remedial Investigation.
3. In Chief Tom Tucker's interview, he indicated "*Discharge under permit with Yuma County.*" [Interview of Chief Tom Tucker, Question 20, Appendix B]. Verify if typed response text referring to *Yuma* County discharge permit is correct.
4. According to interview questionnaire, Chief Tom Tucker should have been asked "*Were retention ponds built to store discharged AFFF? Was the AFFF trickled to the sanitary sewer or left in the pond to infiltrate?*" [Interview of Chief Tom Tucker, Question 11, Appendix B]. No response is noted in the transcript. Was the question asked during the interview?

CLOSURE

ADEQ may amend comments, evaluations, and concurrence if evidence to the contrary of our understanding is discovered; if received information is determined to be inaccurate; if any condition was unknown to ADEQ at the time this document was delivered; if other parties bring valid concerns to our attention; or site conditions are deemed not protective of human health and the environment within the scope of this Department.

Re: Response to: *Review of the Draft Preliminary Assessment Report for Aqueous Film-Forming Foam (AFFF) Areas at Tucson International Airport* (September 2023), prepared by TechLaw and dated November 9, 2023.

Dear Ms. Aycock,

The Tucson Airport Authority (TAA) has reviewed comments received from TechLaw, as formally presented in a document entitled, **Review of the Draft Preliminary Assessment Report for Aqueous Film-Forming Foam (AFFF) Areas at Tucson International Airport, September 2023**. The TechLaw review was prepared for Ms. Mary Aycock with the U.S. Environmental Protection Agency on November 9, 2023. TechLaw comments were drafted in response to the *Draft Preliminary Assessment Report for Aqueous Film-Forming Foam (AFFF) Areas at Tucson International Airport*, prepared for the TAA by Parsons Environment & Infrastructure Group Inc., and dated September 2023.

Please find a response to each EPA comment provided herein.

TECHLAW GENERAL COMMENTS

Comment 1: The Draft PA indicates per- and polyfluoroalkyl substances (PFAS) sampling has been conducted; however, additional details associated with the areas investigated under the Draft PA investigation are not provided. For example, Section 2.2.5 (Groundwater Use and PFAS Sampling) indicates results from PFAS sampling conducted at the Central Well Field wells within the impact of the Tucson International Airport Area Superfund Site (TIAA) and nine private wells near the TIAA Superfund Site were found to exceed the 2016 USEPA Health Advisory Limits (HALs); however, the location of these wells relative to areas of concern (AOCs) is not provided. It is noted that Appendix C (Supporting Documentation) provides an overview map of Tucson Water Production Well Combined PFAS Detections; while the Tucson Airport Remediation Project (TARP) is labelled on the map, no other TIAA features are included to support correlation between the data and specific areas of the site. Additionally, the HALs used to screen data in the earlier sampling events are outdated and the section should provide an update based on the most recent 2023 USEPA Regional Screening Levels (RSLs) for PFAS. Please revise the Draft PA to include an updated historical sampling narrative utilizing the 2023 USEPA Regional Screening Levels (RSLs) for PFAS and to clarify the locations with historical PFAS exceedances in relation to AOCs.

- **TAA Response to Comment 1:** TAA acknowledges this opportunity to clarify the scope and intent of the Preliminary Assessment (PA). TAA sees the PA as a preliminary means to identify aqueous film forming foam (AFFF) AOCs based on locations where potential releases of AFFF may have occurred on the Tucson International Airport. As such, we would consider the evaluation and assessment of PFAS investigations performed outside of the TUS property as being outside of the scope of the PA. However, TAA does recognize the significance of these offsite investigations. Clarification will be added in Section 2.2.4 to better indicate the sources/references of the previous PFAS sampling events (to include those performed by Tucson Water and the Air National Guard) discussed in this section. We anticipate incorporating an evaluation of these offsite investigations, to include the more recent sampling events analyzed at the current USEPA RSLs and an assessment of the analytical data collected from these events (to include adjacent offsite PFAS investigations, such as those at Morris Air National Guard Base and Air Force Plant 44) into later stages of work.

Comment 2: It is unclear whether potential sources of PFAS, other than AFFF, have been investigated at TIAA, or when investigation of other sources may be implemented. Section 1 (Introduction) states, “This Preliminary Assessment (PA) report documents the evaluation of potential sources of per- and polyfluoroalkyl substances (PFAS) related to the use and storage of aqueous film forming foam (AFFF) at Tucson International Airport (TUS);” however, it is unclear whether potential PFAS sources other than AFFF have or will be investigated. For example, metal plating processes, storage warehouses, pesticide use, automobile maintenance shops, photographic processing facilities, laundry/waterproofing facilities, car washes, stormwater or sanitary sewer components, and biosolid application areas, are areas where PFAS may have been used and released. Please revise the text to clarify whether or when the site will be evaluated for all applicable types of PFAS use.

- **TAA Response to Comment 2:** As stated above, the scope of this PA is specific to identifying AOCs from indicators of AFFF use and storage at TUS, as identified during the historical research and onsite assessment of the PA. TAA acknowledges that the investigation of PFAS released from non-AFFF sources will require consideration; however, we also would anticipate performing this work in a separate effort.

Comment 3: The Draft PA lists 38 AOCs; however, it does not provide a naming system to facilitate tracking through the document and potential future submittals. For example, the AOCs could be numbered consecutively which would reduce potential confusion between individual areas discussed in the Draft PA and support continuity between the Draft PA and future submittals. Please consider implementing a naming and numbering convention for the AOCs included in the Draft PA.

- **TAA Response to Comment 3:** TAA acknowledges and concurs with this observation, and we are happy to improve the overall usability of the PA by incorporating such revisions. AOC numbers will be added to the text, Table 1, Table 3, and Figures 2 through 4.

Comment 4: The text of the Draft PA indicates that there were no air releases of PFAS; however, this is misleading. Some constituents of AFFF, including perfluoroalkyl iodides (PFAIs), fluorotelomer iodides (FTIs), fluorotelomer alcohols (FTOHs), fluorotelomer olefins (FTOs), fluorotelomer acrylates (FTACs), and fluorotelomer methacrylates (FTMACs), have been demonstrated to be volatile (see <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5258797/>), and FTOHs have been found in some AFFF formulations. As such, a vapor intrusion exposure pathway for industrial workers should be considered during future investigations. Please revise the text to discuss the potential for a vapor intrusion exposure pathway based on the volatile constituents that may be included in AFFF formulations.

- **TAA Response to Comment 4:** TAA acknowledges and concurs with this observation, and offers to elaborate on this specific pathway of exposure with revised language. All previous uses of the statement, "There are no PFAS air releases associated with the area; therefore, the air pathway is not applicable", will be replaced with the following language: "Neutral PFAS such as fluorotelomer alcohols (FTOHs), perfluorooctane sulfonamide (FOSA), and perfluorooctane sulfonamido ethanol (FOSE) are more volatile than negatively charged PFAS. Neutral PFAS have been found in the vapor phase in indoor environments, have been reported in high concentrations in AFFF, and vapor intrusion of these PFAS may occur from AFFF-contaminated groundwater (ITRC, 2023)."

Comment 5: The text does not discuss the potential for residual AFFF to be released into the environment after replacement foam was introduced. The text indicates that fire trucks and AFFF systems were rinsed to decontaminate them; however, studies indicate that triple rinsing fire trucks or AFFF fire suppression systems in buildings does not ensure removal of all PFAS. As a result, PFAS may remain in the system and be released to the environment as the replacement foam is used. Please revise the text to consider that residual PFAS contamination may be present after rinsing of fire trucks and AFFF systems, and therefore, may be released after replacement foam was introduced.

- **TAA Response to Comment 5:** Comment 5 appears to refer to a transition from AFFF to a fluorine-free (F3) foam (and the related complications involved with removing all PFAS from a truck or suppression system, even after multiple rinses). However, TAA has not yet made the transition to F3. The foam change-out project summarized in Section 1.2 of the draft PA pertains to a 2019 transition from C8 (i.e., long-chain) AFFF to C6 (i.e., short-chain) AFFF. Given that TAA has not transitioned to a fluorine-free foam, and that the draft PA does not indicate otherwise, TAA suggests that Comment 5 is not actually applicable.

Comment 6: It is unclear why some areas that may be of potential interest depicted in Appendix C (Supporting Documentation) are not included in the Draft PA narrative and depicted on site figures. For example, Appendix C depicts the Hudgon Air Service and the General Aviation (PDF Page 109) and the CFR Fire Station and burn pits (PDF Page 110) but they are not included on other figures or discussed within the text. It is also unclear if all hangars were evaluated for the presence of fire suppression systems. Please revise the Draft PA to discuss the information presented in the historical supporting figures in Appendix C in detail to ensure all potential sources of PFAS contamination have been addressed and clarify whether all hangars that may have or have had fire suppression systems have been addressed.

- **TAA Response to Comment 6:** The CFR Fire Station and burn pits (PDF Page 110) correlate to the Current TAA Fire Station and Former Fire Training Facility shown on Figure 4. The burn pits are shown on Figure 4 within the Former Fire Training Facility. To clarify this, text will be added to Section 3.5.1, Former Fire Training Facility, and Section 4.5.1, Current TAA Fire Station (B-284), to correlate these areas to those shown on PDF Page 110. Further, as noted in Section 5.1, there are limitations to the PA. Using the historical documents available, such as the Existing Data Report (DBSA, 1993), all areas of suspected AFFF use have been identified; however, historical documents did not typically identify whether hangars had fire suppression systems. Working within the constraints of these limitations, all hangars known to have had fire suppression systems have been identified.

TECHLAW SPECIFIC COMMENTS:

Comment 1: Section 3.1.1, TAA Hangars – Former Fire Training Area, Page 7: The text indicates the Former Fire Training Area (FTA) is located south of the Old Fire Station; however, review of Figure 2 (Potential AFFF Areas of Concern Zone 1) indicates that the Former FTA is actually located south of the Original Fire Station. Please revise the text to address the discrepancy in the area name.

- **TAA Response to Comment 1:** TAA acknowledges this disparity, and will revise the text to state that the Former FTA is located south of the Original Fire Station.

Comment 2: Section 3, Fire Training Areas, Section 4, Non-Fire Training Areas and Appendix A, Photo Documentation, PDF Pages 60, 65, 70, and 75: Some of the photographs depict red stained surface cover that may be a result of AFFF spills, including the following locations: Bombardier Building X, Bombardier Building H, TAA Fire Station Nozzle Testing Area, Current TAA Fire Station (B-284) and Twin Engine (Piper PA30) Emergency Response Area. However, the corresponding area writeups in Sections 3 and 4 do not include these observations. For example, Section 4.3.5 (Bombardier Building H) states that no use or spills of AFFF were recalled; however, the concrete surrounding one of the four hose stands appears to be stained red; and, Section 4.5.1 (Current TAA Fire Station (B-284) does not discuss the evidently stained

concrete likely resulting from AFFF spills. Additionally, since the ages of these buildings are unknown, and spill reporting prior to 2000s and recollection of historical spills, due to employee changeover, is unreliable, there is potential for unidentified spills to have occurred. Finally, in areas where there were undocumented or documented AFFF spills, there is a potential for contaminant release to the environment even if the spills were cleaned, due to permeability and discontinuity (e.g., cracks and joints) of concrete surfaces. As such, all areas with a foam system or evidence of potential AFFF spills (e.g., red staining) should be discussed and investigated further. Please revise the discussions in Sections 3 and 4, where appropriate, to discuss the red stained concrete visible on photographs in Appendix A that may be indicative of AFFF spills and recommend additional investigations in any location with a foam system or where the age of the facility could have supported AFFF use. In addition, please revise the Draft PA to indicate whether employees and others that were present during inspections or interviews had direct knowledge of each facility over the full operational period of the facility.

- **TAA Response to Comment 2:** TAA acknowledges this observation and agrees that the correlation between various photographs and their related write-ups in the report can be made more clear. Sections 3 and 4 will be revised to include discussion of the visible stains on concrete in the photographs in Appendix A. Please note that these areas of visible staining noted by TechLaw were already recommended to proceed to site inspection in the Draft PA; therefore, no changes will be made to the recommendations listed in Table 3 as a result of this additional discussion. Further, please note that the Draft PA more generally recommends additional investigation at any location with a foam system or where the age and purpose of the facility could have supported AFFF use.

For additional clarification, the text in Sections 3 and 4 will be revised to specify the time span for which employees (and others present during inspections/interviews) have direct knowledge of the activities and operations taking place in each area.

Comment 3: Section 3.2.2, Surface Water Pathway, Page 7, and Section 3.4.2, Surface Water Pathway, Pages 9 and 10: Areas identified as receiving runoff from Zone 1 and Zone 2 are not proposed for further PFAS investigation. The text indicates that the El Vado Wash received runoff from Zone 1 and the Santa Clara Wash received runoff from Zone 2, as depicted on Figures 2 (Potential AFFF Areas of Concern Zone 1) and 3 (Potential AFFF Areas of Concern Zone 2), respectively; however, neither area is recommended for investigation. Additionally, as presented on Figure 3, fire drill areas D-6 and D-3 appear to discharge directly to the Santa Clara Wash, and therefore this area should be recommended for further investigation. Finally, the El Vado Wash is not labeled on Figure 2. Please revise the Draft PA to recommend further investigation at the El Vado Wash and the Santa Clara Wash, and label the El Vado Wash on Figure 2..

- **TAA Response to Comment 3:** As stated in our response to the first general question from TechLaw, the intent of the PA is to identify AFFF AOCs where the potential release of PFAS may have occurred. As such, the PA has identified the AFFF AOCs on TAA property where AFFF may have been used or stored. Future phases of work are expected to involve the evaluation of actual PFAS impact at each AFFF AOC. Should a release of PFAS at a respective AFFF AOC be confirmed, the nature and extent of PFAS contamination tied back to that AFFF AOC will be further explored. This further investigation will include investigating potential impacts to receiving surface water, if any, as a result of runoff from each AOC. In preparation for this future investigation, a label will be added to Figure 2 to identify the El Vado and Valencia Washes.

Comment 4: Section 4.1.3, US Forest Service (D-261), Page 13: The text does not provide sufficient discussion to support the conclusion that no evidence of historical PFAS use in this location exists. The text indicates the US Forest Service used this facility starting in 1973 and includes a 2021 referenced statement that the US Forest Service does not use PFAS as an ingredient in their current fire systems; however, the historical fire retardant composition should also be discussed to support the noted conclusion. Please revise the text to discuss the historical fire retardant composition from 1973 to the present.

- **TAA Response to Comment 4:** TAA acknowledges this observation and agrees that the historic US Forest Service location warrants further discussion and investigation. Additional text will be added to this section to expand on the understanding of USFS fire retardants, and to indicate this area as a former helicopter landing zone. The final sentence in Section 4.1.3 ("No evidence for Class B AFFF was found during the literature search for this building") will be replaced with the following sentence: "Although no evidence for Class B AFFF was found during the literature search for this building, the historical use or storage of AFFF cannot be completely ruled out given that this building served as a slurry base/staging area for firefighting operations and a landing zone for helicopters". Table 3 and Section 5 conclusions will be revised to include the US Forest Service (D-261) as an AOC recommended to proceed to a site inspection.

Comment 5: Table 3, List of Potential Aqueous Film-Forming Foam Areas of Concern, PDF Page 41: No further remedial action planned is the recommendation for the following AOCs: Fire Drill Training Area D-4, Original Fire Station, and U.S. Forest Service; however, it is unclear whether the limitations of the PA as described in Section 5.1 (Limitations and Potential Data Gaps) support this conclusion. The text states, "PFAS are emerging contaminants, and because of this recent awareness, the airport does not have the same detailed records regarding the storage, handling, and release of AFFF as for other substances used at the airport;" as such, it is unclear whether the Draft PA provides sufficient evidence to exclude these sites from further investigation. For example, the dates of use of the described areas and therefore the assumption of AFFF use could be incorrect. To reduce the uncertainty associated with the lack of data and

unclear early use of AFFF, sampling should be performed to support the decision process. Please revise the Draft PA to recommend that all AOCs proceed to an RI.

- **TAA Response to Comment 5:** TAA acknowledges and concurs with this observation. As stated in TAA's Response to Comment 4, the U.S. Forest Service (D-261) AOC will be recommended to proceed to site inspection per the response to Specific Comment 4 above. The text regarding Fire Drill Training Area D-4 and Original Fire Station will be further revised to indicate that the operational period of those areas may have overlapped with possible early use of AFFF in the 1960s. These two areas will be recommended to proceed to site inspection on Table 3 and in the Section 5 Conclusions.

Comment 6: Appendix A, Photo Documentation, PDF Pages 64 to 65: The photographs depict hanger drains and use the caption "closed drains" in the photograph; however, it is not clear what is meant by closed drains. For example, it is unclear whether these drains are a component of the sewer system, stormwater system that discharges to the washes, or discharges to other locations. Please revise the Draft PA to define the term closed drains and discuss the drainage output location(s).

- **TAA Response to Comment 6:** TAA acknowledges this observation and offers a revised term to address this observed ambiguity. The former use of "closed drain" will be revised to read, "trench drain containment system." Please note there is no discharge from the trench drain containment systems; these features function as sumps in that they collect and hold runoff. Rather than discharging to any larger system or waterway, these drains are pumped out and have no discharge mechanism.

Comment 7: Appendix B, Interviews and Site Visit Notes, Page 3 of 5: The site interview form indicates five-gallon buckets were used to transfer foam into vehicles and were disposed in dumpsters; however, it is unclear where the dumpsters were located and where the associated wastes were disposed. For example, it is unclear whether a landfill within TIAA was used for disposal or if the wastes were shipped offsite. Please revise the Draft PA to clarify where the five-gallon buckets were managed and disposed.

- **TAA Response to Comment 7:** TAA acknowledges this observation and has performed additional research into what this process involved. Personnel from TAA's Maintenance and Fire Departments have verified that empty buckets were discarded as routine waste into nearby dumpsters. Information will be added to Section 4.5.1, Current TAA Fire Station (B-284), and Section 4.5.6, TAA Vehicle Maintenance Bays, to indicate that AFFF was poured from buckets into Aircraft Rescue and Fire Fighting units at each location, and that the empty buckets were placed in dumpsters at each area for general solid waste disposal at an off-site landfill. Please note that these two areas were already recommended to proceed to a site inspection in the Draft PA; therefore, no changes to the recommendations listed in Table 3 will occur as a result of this revised comment and response.

With regards to historic onsite landfilling activities, and the potential for disposal of similar containers in landfills onsite, it is unknown if AFFF containers were historically dumped at the TAA landfill, where dumping reportedly ceased in the mid-1960s (DBSA, 1993). However, it should be noted that Fire Drill Training Area D-6 is located on top of this historic TAA landfill. As such, this AOC was already recommended to proceed to site inspection in the Draft PA.

Comment 8: Appendix B, Interviews and Site Visit Notes, Page 3 of 5: It is unclear whether all of the drainage areas surrounding incident sites and fire stations are recommended for further investigation. The site interview form indicates vehicles were decontaminated by filling the pipes with water and spraying the contents to remove left over foam, either at the incident site or at the Fire Station; however, it is unclear whether all of the associated drainage areas are included in the recommendation for further investigation. For example, the drainage area surrounding the Alpha 17 Runup Pad Fire Training Area, as shown in the photograph in Appendix C (Supporting Documentation, PDF Page 117), and Martin Reservoir, as identified by Chief Tom Tucker in Appendix B (Interviews and Site Visit Notes, PDF Page 86) should be investigated. Please revise the Draft PA to clarify whether all drainages potentially associated with the AOCs will be included for further investigation.

- **TAA Response to Comment 8:** TAA acknowledges these observations, but also reiterates our response to Specific Comment 3. Should a release of PFAS at a specific AFFF AOC be confirmed in the course of subsequent sampling and analysis work, the next phase of investigation would involve characterizing the nature and extent of PFAS impact at that respective AFFF AOC. Assessing related impacts to receiving waters or areas subject to surface water runoff will be incorporated into this effort.

Comment 9: Appendix B, Interviews and Site Visit Notes, Page 4 of 5: The site interview form for Chief Tom Tucker, indicates inactive FTA logbooks may be helpful in determining whether AFFF use is documented. The form also indicates that office/records warehouse would have logs of aircraft crashes. However, it is unclear whether review of these logs and logbooks was included in the scope of the Draft PA. Please revise the Draft PA to clarify whether the logbooks for old FTA activities and aircraft crashes were reviewed.

- **TAA Response to Comment 9:** The TAA fire department logbooks from 2001 to present were reviewed, however no relevant information was noted. Personnel from both TAA's fire department and warehouse/archives departments have confirmed that earlier logbooks could not be located, likely due to record retention practices. This information will be added to Section 5.1 Limitations and Potential Data Gaps.

Comment 10: Appendix B, Interviews and Site Visit Notes, Page 4 of 5: The site interview form for Chief Tom Tucker, indicates AFFF may have been used as a precaution in response to fuel releases to prevent

fires; for example, foaming of runways. However, it is unclear whether all of the runways have been evaluated in the Draft PA and whether runways and associated drainages will be included for further investigation. Please revise the Draft PA to clarify whether runways have been evaluated for potential AFFF contamination. If not all runways were evaluated, please revise the Draft PA to recommend the inclusion of runways that may have received precautionary foam in further investigations.

- **TAA Response to Comment 10:** In a follow-up interview with Chief Tucker, he clarified that the practice of foaming runways for precautionary purposes has not been employed during his tenure at TAA. Given the information available, all runway areas known to have received AFFF discharge (i.e., Alpha 17 Runup Pad Fire Training Area and TAA Annual Nozzle Testing Area) are already recommended to proceed to site inspection in the draft PA.

Comment 11: Appendix B, Interviews and Site Visit Notes, Page 4 of 5: The site interview form for Chief Tom Tucker, indicates AFFF may have been used at the Ascent west ramp; however, it is unclear whether this area is included in either the Ascent Aviation Fire Emergency Response area or Ascent Aviation Hangar 2. As the site interview form indicates that AFFF may have been used on the Ascent west ramp, it should be included for further investigation. Please revise the Draft PA to clarify whether Ascent west ramp is included within a current AOC.

- **TAA Response to Comment 11:** TAA acknowledges this observation, and as a result of a follow up interview with Chief Tucker has clarified that the incident in question at the Ascent west ramp does, in fact, correlate to the Ascent Aviation Fire Emergency Response. The text will be updated to note that this incident of AFFF use is noted in Chief Tucker’s interview as “At Ascent on west ramp.”

Comment 12: Appendix C, Supporting Documentation, PDF Page 113: The Zone F Site Plan – North Apron Area figure depicts a north apron drainage area in the northwest side of the airport boundary that may have received AFFF-contaminated wastewater from the surrounding AOCs (including the Air National Guard (ANG) or the TAA Annual Nozzle Testing Area); however, sampling is not recommended in this area. All areas that may have received AFFF contaminated water should be included in the scope of the Draft PA. Please revise the Draft PA to include sampling in the North Apron Drainage Area.

- **TAA Response to Comment 12:** TAA again reiterates our response to similar comments above. Should a release of PFAS at a specific AFFF AOC be confirmed through sampling and analysis, the next phase of work would involve characterizing the nature and extent of PFAS impact at that respective AFFF AOC. Assessing related impact to any receiving water or surface water runoff will be incorporated into this later characterization effort.

TAA hopes that these responses adequately address questions received from EPA, as prepared by TechLaw on November 9th, 2023. If additional information or discussion is needed, please contact myself or Ken Nichols, VP of Airport Development at TAA, at any time.

Re: Response to ADEQ Comments received via email on January 5, 2024, with regards to:
Draft Preliminary Assessment Report for Aqueous Film-Forming Foam (AFFF) Areas at Tucson International Airport, Tucson, Pima County, Arizona; prepared by Parsons Environment & Infrastructure Group Inc., dated September, 2023.

Dear Mr. Perkovac,

The Tucson Airport Authority (TAA) has reviewed comments received from the Arizona Department of Environmental Quality (ADEQ) on January 5, 2024. The ADEQ comments were provided in response to the Draft Preliminary Assessment Report for Aqueous Film-Forming Foam (AFFF) Areas at Tucson International Airport (prepared by Parsons Environment & Infrastructure Group Inc. and dated September 2023).

Please find a response to each ADEQ comment provided herein.

ADEQ GENERAL COMMENTS

Comment 1: TechLaw, under contract to the United States Environmental Protection Agency (US EPA) reviewed the referenced document and presented comments to the US EPA. ADEQ reviewed the TechLaw comments and considers the comments generally appropriate (Correspondence to Ms. Mary Aycock, US EPA, San Francisco, CA; from TechLaw, Lakewood, CO; TechLaw; Correspondence reference 83122-09-10-APAA-DR-1947; dated November 9, 2023).

- **TAA Response to Comment 1:** Comment acknowledged. TAA thanks ADEQ for its review and looks forward to resolving any resulting questions and comments through a collaborative exchange of dialogue and input.

Comment 2: Surface water drainage areas, washes, wastewater disposal areas, and outfall locations do not appear to be included as potential Aqueous Film-Forming Foam (AFFF) areas of concern (AOCs). According to the document there are many incidents and locations where AFFF was released to the land surface. In the interviews it was noted "Before approx. 2019, any discharges would have been left on ground." [Interview of Chief Tom Tucker, Question 21, Appendix B]. During the interview of Chief Tom Tucker, when asked about drainage patterns and point source is likely AFFF Area of Concern (AOC), he

answered “Nearby washes.” [Interview of Chief Tom Tucker, Question 37, Appendix B]. Additionally, it is unclear if discharge at fire training areas were contained and or left on the surface. There is the possibility that AFFF releases to the land surface were subsequently carried from release location(s) by storm waters and or surface washings. ADEQ considers surface water drainage areas, washes, wastewater disposal areas, and outfall locations as potential environmental threat routes and should be considered potential AOCs.

- **TAA Response to Comment 2:** TAA acknowledges this opportunity to clarify the scope and intent of the Preliminary Assessment (PA). TAA sees the PA as a preliminary means to identify AFFF AOCs based on locations where potential releases of PFAS may have occurred on TAA property. As such, the scope of this PA is focused on identifying areas where AFFF may have been used or stored. TAA would see the future phases of investigation as involving an evaluation of each AFFF AOC for the actual presence/absence of PFAS contamination. This further investigation would include investigating potential impacts to receiving surface waters as a result of runoff from the AOC.

Comment 3: Tucson Airport Authority (TAA) preliminary assessment effort should assess and incorporate available data from nearby per- and polyfluoroalkyl substance (PFAS) investigations. ADEQ understands that Department of Air Force (DAF) facilities near the TAA property have performed select PFAS sample collection and sample analyses. DAF facilities like Morris Air National Guard and also the area commonly called Air Force Plant 44 have obtained some select PFAS analytical results for select areas. Coordinating TAA efforts, after correlating others’ efforts to TAA property, could benefit stakeholders.

- **TAA Response to Comment 3:** As indicated in our response to ADEQ Comment 2, the PA is intended to identify AFFF AOCs where the potential release of PFAS may have occurred on TAA property (which we further define as consisting of City-owned property with a TAA lease and property owned by TAA). The scope of the PA does not include assessment and incorporation of available data from nearby PFAS investigations. However, to acknowledge the relevance and significance of nearby investigations, a subsection entitled, “Adjacent PFAS Sources,” will be added to Section 2.0 of the PA Report. This subsection will acknowledge the PFAS investigations at Morris Air National Guard and Air Force Plant 44, and shall reference publicly available documents from both investigations. Further, as TAA moves into subsequent phases of PFAS investigation, the data from nearby PFAS investigations will be considered.

ADEQ SPECIFIC COMMENTS:

Comment 1: The description of Fire Drill Training Area D-4 states “This fire training area may have overlapped with the initial use of AFFF.” [Page 9, Section 3.3.2.2, 1st paragraph, last sentence]. However, in Table 3 it states “Former fire training area [D-4] used in the late 1950s and 1960s, when it is presumed

that AFFF was not yet on the airport.” [Table 3]. Please verify the potential use of AFFF at Fire Drill Training Area D-4.

- **TAA Response to Comment 1:** TAA acknowledges this disparity and offers the following clarification. Table 3 and Section 5.0 Summary and Conclusions will be revised to indicate that Fire Drill Training Area D-4 is recommended to “Proceed to Site Inspection,” as this fire training area may have overlapped with the initial use of AFFF in the 1960s.

Comment 2: In Table 3, it is noted that the Air National Guard Current Nozzle Testing Area is currently part of the Air National Guard Remedial Investigation. Please provide reference indicating this area is included in the Air National Guard Remedial Investigation.

- **TAA Response to Comment 2:** In follow-up inquiries to ANG personnel in January 2024, TAA has verified the inclusion of this nozzle testing area in the ANG investigation. In Table 3, the following reference will be added to the recommendation column for the Air National Guard Nozzle Testing Area: “Currently part of Air National Guard Remedial Investigation (Golden, 2023, **Appendix B**, Interviews and Site Visit Notes).”

Comment 3: In Chief Tom Tucker’s interview, he indicated “Discharge under permit with Yuma County.” [Interview of Chief Tom Tucker, Question 20, Appendix B]. Verify if typed response text referring to Yuma County discharge permit is correct.

- **TAA Response to Comment 3:** Thank you for catching this transcription error. The notes for Chief Tom Tucker’s interview will be corrected to state Pima County discharge permit instead of Yuma County.

Comment 4: According to interview questionnaire, Chief Tom Tucker should have been asked “Were retention ponds built to store discharged AFFF? Was the AFFF trickled to the sanitary sewer or left in the pond to infiltrate?” [Interview of Chief Tom Tucker, Question 11, Appendix B]. No response is noted in the transcript. Was the question asked during the interview?

- **TAA Response to Comment 4:** To ensure that these questions were properly addressed, a follow-up interview was conducted with Chief Tom Tucker on January 17, 2024. In response to the two questions stated above, Chief Tucker stated that no retention ponds were built to store discharged AFFF. The notes for Chief Tom Tucker’s interview will be amended accordingly.

TAA hopes that these responses adequately address questions received from ADEQ on January 5th, 2024. If additional information or discussion is needed, please contact myself or Ken Nichols, VP of Airport Development at TAA, at any time.

Becca Cammack
